FOREIGN MONEY MARKET EASIER

Beneficial Effect Upon Speculation on New York Stock Exchange.

SHORTS BEGIN COVERING

LARGE BUYING ORDERS FOR LONDON ACCOUNT EXECUTED.

New York, Oct. 25.—The speculation in stocks today continued to find practically all its incentive from the condition in the foreign money markets, although those influences were reversed from the effects shown last week. This was due to the relaxation in the foreign money markets. It was known by the time the opening of the New York stock market that the German bank authorities had decided that it was unnecessary to advance the minimum discount rate and the report of the condition of the bank offered explanation for this decision in the strengthened position disclosed. Not only was the bank showing of good effect on Berlin, but that center also had a report that the Bank of France had determined on measures to aid in relieving the international money markets.

The Bank of France is possessed of such authority over its holdings of gold as to make the parting with it largely a matter in the discretion of its governors, and up to today no suggestion has been heard of a likelihood of that institution coming forward to supply any part of the demand for gold. It was this situation which made New York the most probable point for the diversion of the demand for gold from London.

With the new aspect of affairs there was an easier tone in the London discount market and in the foreign exchange market in New York.

The Saturday bank statement had its influence in reassuring sentiment over its money outlook. There was some revision also of the estimates of the volume of shipments of American securities coming home from London and which, on arrival, would call for banking operations that would make further demands on the money markets. Some of these contemplated shipments, it was reported, would be averted by the easing of the money tension.

Weakness in the copper metal market was ascribed partly to the tight money market and the heavy stocks of copper which are being held calling for extensive credits. The price of copper in London was without effect on copper securities in New York, which were leading features of strong selling in the early market. The prices thus made were better to some extent as the day progressed, but the volume of trading was diminished greatly. The U. S. Steel quarterly report to be published tomorrow came in for some speculation, covering operations by bars played an important part in the price recovery.

Bonds were regular. Total sales, par value, \$3,329,000.

United States bonds were unchanged on call.
